

Life Saving Innovation

AWP Safety AFADs offer smart, safe and efficient work site protection.

Preferred by Drivers

Missouri DOT found that vehicles approached 4.2 mph slower and stopped 11.4 ft. further back when work sites utilize Automatic Flagging Assistance Devices (AFADs).* The study also discovered 78% of drivers prefer AFADs over human flaggers.

AFAD Advantages

IMPROVED SAFETY

Drivers are more distracted these days. Research shows motorists are more responsive to AFADs than human Protectors.

KEEP YOU ON SCHEDULE

Fewer AWP Protectors can cover more of your work zones for greater coverage and availability, despite today's labor challenges.

LOWER OVERALL OPERATING COSTS

Finishing work on or ahead of schedule reduces your potential overtime costs.

REDUCED LIABILITY

Built-in surveillance cameras show what really happened in the event of an accident.

How AFADs Work

Our smart, wireless technology allows one Protector to safely control multiple AFADs from a roadside tablet. This provides greater visibility of the entire work site and puts Protectors closer to your crew members for better communication.

Onboard Google/Waze technology diverts 25% of traffic around the work site entirely, further reducing the odds of an accident.

If a vehicle does breach the work site, an intrusion alarm immediately alerts everyone to get out of the way.

What to Expect

COST EFFECTIVE – over time, AFADs drive down your project costs by keeping you on/ahead of schedule and reducing the chance of costly accidents

RELIABLE – durable equipment is operated by Protectors who show up on time

EFFICIENT – AFADs are quicker for Protectors to set up, tear down and move which means less waiting for your own crews
