

THE BUILD IS ON

Execution Season is Here

WHAT'S DRIVING DEMAND

Field activity is gaining momentum. Crews are ramping up as BEAD deployments move forward alongside private network and utility projects — often in the same corridors.

For you, that means tighter coordination, shifting timelines, and more work happening at night. Managing that overlap effectively is key to keeping projects on track.

LEAD THE WAY: HOW TEAMS ARE STAYING AHEAD

Removing friction before crews ever hit the field helps keep projects moving. Consistency is the key to fewer surprises, productive crews and on time schedules. Here's how to make it happen:

			
<p>Set work windows early across municipalities</p>	<p>Standardize traffic control plans for repeat builds</p>	<p>Reduce rework from permit resets and changing setups</p>	<p>Use safety practices that support steady, uninterrupted work</p>

OPERATIONS DIRECTOR INSIGHT

“If traffic control changes every day, your schedule will too. The most consistent crews are the ones that lock in their approach early and stick to it.”

A BUILD THAT STAYED ON TRACK

One regional telecommunications contractor faced a familiar challenge: installing aerial and underground fiber across multiple metro areas.

Key challenges included:

- Navigating different traffic standards across jurisdictions
- Moving crews between low-speed roads and busy corridors
- Maintaining a long-term schedule with consistent setups

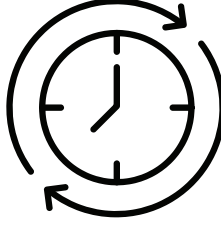

AWP Safety supported daily traffic control based on site conditions and coordinated setups across state, county, and local roads.

THE RESULT

Steady progress, even as locations changed

More predictable execution across the project lifecycle

Safer, more organized work zones for crews and the public

PARTNERS IN PROGRESS

As you manage active builds, consistent traffic control helps protect your schedule and keep work zones safer for both crews and the public.

With the right approach in place, you can keep work moving — day in and day out.
